## Projects

**Driver Drowsiness Alert System** | *JS, NodeJS, MongoDB, Arduino* | [Click Here](#)

**4**

- Builds a drowsiness detection and alert system that will alert the driver as soon as he fell asleep
- Using an IR sensor, relay module, GSM SIM900-A, Arduino Uno, gear motor, step-down converter, and glasses with IR sensor, this project detects driver eye closure. When the driver's eyelids close, a 2-second timer starts, and an alarm alerts the driver. The wheel's speed is reduced via the relay module, and after 3 beeps, the vehicle stops using the brakes. Alerts are sent to the driver's contacts, enhancing road safety.
